CIMA AUTOMATIC MARKER

To select pigs to deliver to the slaughterhouse

CIMA AUTOMATIC MARKER is a **Cima Control Pig** tool which marks automatically with colored spray the pigs selected by the Cima Control Pig based on the weighing range requested by the slaughterhouse to have the maximum income and it consists of:

Control unit: It's interfaced with Cima Control Pig unit and it can handle from 1 up to 4 markers.

Setting program: It's possible to set 4 selection types based on weighing:

- **Weight** > (more than...) example 100kgs, all the pigs with a weight more than 100kgs will be marked
- **Weight** < (less than...) example 100kgs, all the pigs with a weight less than 100kgs will be marked
- **Weight** >< (between two values) example 100kgs and 110kgs, all the pigs with a weight between 100 and 110 kgs will be marked
- **Weight** <> (out from two values) example 100kgs and 110kgs, all the pigs with a weight less than 100 kgs and all the pigs with a weight more than 110kgs will be marked

The weight settings are up to the farmer for each marker.

Marker: Made of stainless steel and it's prepared to use spray colored cans of size 400ml and 500 ml. The can automation is given by the connecting cable with the command unit powered by the Cima Control Pig.

Two adjustable stainless-steel brackets allow fixing it to the corridor wall.

Eg. With 4 Markers
