NON-ABSORBENT SURFACE TREATMENT

PRESERVES AND PROTECTS AGAINST WATER, OIL AND FATS

SIGMAtek Non-Absorbent Surface Treatment (NABS) creates a unified, flexible, and environmentally friendly layer which inhibits the reproduction of bacteria and rejects soiling of any kind. At 1/500th the size of a human hair, the coating alters the surface properties of the substrate itself while leaving the physical appearance unchanged.

The technology is designed to leave a super-thin coating on the treated surface - covering every thread in a fabric or getting into surface imperfections and pores (see top left image). This coating helps to repel staining and makes cleaning easier and more efficient. This treatment reduces the amount of labour time, intensity and cleaning products needed to clean a surface. In addition, these surfaces also offer passive germ protection by reducing the ability for germs and organic matter to grow. Corrosion inhibitors and active germ protection solutions are available as well.

Highlights:

- Preserves and protects non-absorbent surfaces from most soil, stains, water, oil or fat based product.
- NABS is clear and is alcohol based.
- Surfaces will last much longer and look newer longer when protected by this invisible, flexible, breathable layer.
- Application: Spray on to the surface and rub in with cloth or brush and let the alcohol base dry out, leaving product behind or dip product into NABS.

Industry Examples:

- A major Canadian glass supplier recently replaced their old glass protector with a variation of this MFStek product.
- A major industrial Canadian company uses a variation of this product to more easily clean dirt and grime off service vehicles reducing cleaning time and protecting the vehicles from corrosion

Non-Absorbent is available in 1 litre bottles or in bulk containers. The 1 litre size for spray-on applications covers 100-140 square meters of coverage per bottle depending on the surface. Freight is F.O.B. Laval, Quebec. Local customs charges, taxes, etc are also the responsibility of the buyer. May cause eye, lung and or skin irritation during application therefore eye and respiratory protection, along with gloves, are recommended. See MSDS sheet for full safety details.
